

Quantech Software Releases Q-GPS 2.2.0, Lead Management/CRM.

Revamped Reporting, dealer-specific worksheet and trade appraisal forms, and auto follow-up campaigns improve workflow and productivity.

The latest enhancements to [Q-GPS](#), Quantech's CRM/Lead Management dealership software streamline workflow for sales staff and increase value for management. Enhancements include temporary sales opportunity transfer; auto-applied follow-up campaigns; management reporting support tools, and dealer-specific sales worksheet and trade appraisal forms. "We're constantly adding new features and making existing ones better", explained Mike Martin, Quantech General Manager, "our goal is to make our current customers even happier by improving what they have now based on their feedback and suggestions".

Sales Opportunity transfer tool makes it easy for a sales person to transfer sales opportunities to another sales person, and back again. In less than a minute and a few mouse-clicks, a sales person that goes on vacation can transfer their opportunities to another sales person and have them waiting for them when they return to work.

Using the new Transfer Opps. Feature, sales staff can now transfer some or all of their opportunities to another sales person when they're not in the dealership and have them waiting for them when they return.

Quantech is now loading sales worksheet and trade appraisal forms from the dealerships into GPS. "We found that even though GPS includes sales worksheet and trade appraisal forms, in most cases, dealers wanted to use their own", according to Martin. "Dealerships like being able

to continue using their own forms”, Martin added. General customer, vehicle, and trade information fields are mapped from Q-GPS to the dealership’s form leaving the un-mapped fields blank easily filled in by the sales person.

Q-GPS CRM’s can now automatically apply a follow-up campaign to a lost sale. Whenever an opportunity is set to Lost the correct follow-up campaign is automatically applied to it, creating a group of task reminders.

This release of Q-GPS makes it easier for managers to get the most out of the reporting features with the addition of a new section called Reporting Documentation. The new area has information for each report explaining how it works; a description of what it’s for; and a recommendation on how to use it.
